## FOREWORD

The Economic Development and Planning Office, (EDPO) is pleased to present the seventeenth annual publication of, "The American Samoa Statistical Digest 1994".

The American Samoa Statistical Digest is the standard official summary of statistics on social, economic, and demographic profile of the territory. The Statistical Digest serves both as a summary of aggregated statistics about American Samoa, and also as a guide to source references of information and detailed subject-matter specifications not presented here. The Statistical Digest closely follows the organization and format of its counterparts, the State of Hawaii Data Book, and the Statistical Abstract of the United States.

Emphasis is given to the most recent available economic and social data provided by government agencies (both local and federal), private businesses, organizations and individuals. The EDPO wishes to thank all those involved in the preparation of this book. Without their unwavering cooperation every year, past, present, and future publications would not be possible. Those agencies and businesses are credited in the source references that accompany the tables to which they contributed.

We sincerely hope that users of this book will find the digest useful and informative. We welcome comments and suggestions for improving the Statistical Digest series. A self-addressed suggestion and comment sheet is provided at the end of the book for you to provide us with your comments.

## **STAFF ACKNOWLEDGEMENT**

This report was prepared and compiled by the EDPO's Research and Statistics Division, headed by Vai Filiga, Chief Statistician, and staff: Ianeta Kappel, Statistical Analyst and Specialized Clerks: Lutia Mata'u and Fogatia Letuli.

## **METHOD OF ORDER**

Copies of this report may be obtained for \$7.50 each from the Economic Development Planning Office at Utulei, Executive Office Building, second floor, or may be ordered from outside the Territory by sending a money order for \$10.00 per copy, (postpaid) to the Economic Development Planning Office, American Samoa Government, Pago Pago, American Samoa 96799.

## GUIDE TO TABULAR PRESENTATION

The following symbols used in the tables throughout this publication, are explained in enclosed form in foot-notes to the tables where they appear.

- represents zero or rounds to less than half the unit of measurement shown.

.. not available or not applicable.

r revised.

p provisional.

(D) Data withheld to avoid disclosing data for individual farms.

Headnotes immediately below table titles provide information important for correct interpretation or evaluation of the table as a whole or for a major segment of it.

Unit indicators ("In thousands", "In millions of dollars", etc.) are usually given as the first element of the headnote. In tables where several units are used, the unit indicators are generally given in the stub in the column headings.

Footnotes below the bottom rule of tables give information relating to specific items, figures or symbols within the table. In many tables, details will not add exactly to the totals shown due to rounding.

All annual statistics should be understood as referring to calendar years unless otherwise indicated.

## SECTION I.

### POPULATION

This section presents statistics on the growth, geographic distribution and composition of the population of American Samoa.

The estimated mid year population of the territory as of July 1, 1994 was 54,760 an increase of 1,900 when compared to the mid year 1993 estimated total of 52,900.

The 1990 census reflected a much higher annual growth rate of 3.7 percent since the last two decades. Given this high growth rate, it is expected that our population will reach 63,000 in the year 2000. The high growth rate is attributed to the fact that migration played a significant role in the demographic transition of our population. This is supported by the decline in the percentage of persons born in the territory (from 58.3 in 1980 to 54.7 in 1990), and the apparent net in-migration of about 2,000 persons between the two census periods. On the other hand, the level of fertility (which was expected to decline) has gone up again from 4.4 per 1,000 women between 1981 - 1985 to 4.5 between 1986 - 1990. Economic development, social stability, and better standard of living when compared to neighboring islands have attracted migrants to the territory.

Our population is very young. The median age for the territory (which reflected the demographic structure and periods of transitions in human population), remained at around 21 years, compared to about 33 years for the U.S.. Most human population especially in large developed countries have more females than males because male mortality is higher. This is true for the U.S. where there were more females than males (sex ratio = 95), whereas American Samoa had a sex ratio of about 106 (106 males for every 100 females).

Our population growth is ranked 6th comparing to other countries in the South Pacific Region, and with only about 200 square kilometers (77 square miles) of land area, we have about 234 persons per square kilometer or 607 per square mile.

The proportions of those born outside of the territory continued to increase. In 1990, the percent went up from 42 to 45. The distribution of persons' birthplace by age also differ significantly. While the American Samoan born population remained relatively close to the overall distributions (i.e. higher proportions in young ages, 0 - 24 years), the distributions of Western Samoan and the Tongan born were highly concentrated in middle age groups (20 to 39 years), suggesting age selective migration from neighboring islands.
