## INTRODUCTION

This yearbook represents the second publication of the recently established statistical function under the Office of Planning and Budget. This publication replaces the II Quarterly Bulletin of Statistics. The table format and contents of this yearbook differ significantly from the II Quarterly Bulletin. The primary emphasis of this yearbook is on the lucid presentation of economic and social statistics essential for development planning and decision making.

It is our utmost intention to provide, in a readily accessible form, important statistical information that is available on the economic and social aspects of the economy. However, this effort is limited by the inadequacy of recorded data at the sources, in places, wherever coverage is known to be incomplete, the estimates are shown as "not available".

This yearbook represents the efforts of the two statistical officials, Both Leo Chienygen and Andrew Fairman have exerted exceptional professional dedication to this effort and have been able to provide for significant statistical base. Notes of appreciation are also extended to those in the Public and Private sectors who have made contributions to this publication. Without their support this publication would not have been possible.

Finally, comments and criticisms about this publication are welcome so that subsequent statistical publications can be improved and made more accessible to the public.

(2) Bureau of Census personnel have indicated that analysis of Yap-

State's 1980 census indicates a significant undercount. Projected population census indicated that the

1980 population could be approximately 9320.

Note: These figures only show the total volume of fish caught by some local fishermen and Yap Fishing Authority. Reef and off-shore fish have been combined to obtain the total catch for each year. It should be noted that these figures may not reflect the actual catch for each year as only Yap Fishing Authority keeps records of these catches. It should be further noted that both subsistence and commercial fishermen often sell parts of their catch directly to the public.

Notes:

The Hotel capacity in Yap is 26 rooms and the occupancy rate is 80 percent. Each tourist stays on an average of three days. The total number of tourists always present in Yap is three (3) person on average. The daily expenditures is calculated to be 60 dollars per day. Based on our calculation the tourists represent approximately 80 percent of the market (renting room) for the two hotels in Colonia. It is assumed an occupancy rate of 80 percent for the hotels the number of tourists can increase to 2200 per year.
