PREFACE

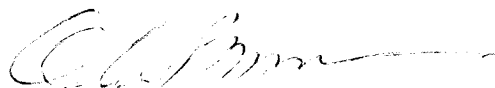

This is the third issue of the Statistical Abstract published by the Office of Planning and Statistics. It is updated to include statistics on most of the subject matter areas, upto 1987. It also include some useful information on the Marshall Islands in a summarized form. To give the user the benefit of using most up-to-date data on population the priliminary results of the Census of Population and Housing 1988, is given as an appendix. More detailed information on the census will be release shortly.

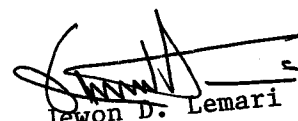

The production of this Abstract has been made possible by the valuable contributions received from various government ministries, departments and other government agencies, private agencies and individuals. Without their assistance and cooperation past, present and future publications would not be possible. We wish to extend our sincere gratitude to all of them for their assistance.

This Abstract was prepared by Mr. A.G.W. Nanayakkara, National Statistician and Messers. Teruo Kaminaga and Caster Konou, Assistant National Statisticians who worked as a team. Mrs. Marciana Lolin, Administrative Officer, Ms. Tarina Jokon and Ms. Netha Jack Clerk/Typists assisted in typing this document. We wish to thank all these officers and Dr. H.M. Gunasekera, Chief Technical Adviser and his staff under UN/DTCD project for their valuable contributions.

Action is being taken to improve the Abstract further. Certain subject areas like National Accounts is yet to be improved. We would welcome any comments or suggestions to improve the future Statistical Abstracts. We also welcome any additional information from organizations, which would be useful to other data users.

We need reliable and up-to-date information to plan the future of our country. As such any assistance in this regard would be a valuable contribution to improve the living standards of the people of Marshall Islands.

Notes:

1) The figures for 1920, 1925, 1930 and 1935 relate to counts as of October 1 and were collected and tabulated by the Japanese Administration.

2) Figures for 1967, 1973 and 1980 are actual census counts: April 1, 1967 (collected by the Peace Corps); September 18, 1973 (TTPI Census) and September 15, 1980 (USBC Census). For other years prior to 1970, the numbers are estimates based on partial census counts, summaries of administrative records or a combination of these methods. For the period since 1970 the estimates are obtained from the 1973 and 1980 census data, using the (modified) component-cohort method of population projection. Estimated data relate to June 30 of the year indicated.

3) Figures do not include residents of Kwajalein Missile Range.

4) Figures for 1985 and 1987 are estimates based on 1980 Census.

5) Census 88 figures are given Appendix 1.

NOTE: The figures from 1974 to 1979 are projections based on 1973 Census of Population and the projections from 1981 to year 2000 are based on 1980 Census of Population and Housing. The projections were done using ESCAP. The total fertility rate (TFR) used for 1973 and 1980 were 7 and 6 respectively, which were the approximate values for these two years based on the available information. The Life Expectancy at birth for males and females in 1973 were 56.20 and 59.70 respectively. The Life Expectancy at birth for males and females in 1980 were 60.50 and 64.20 respectively. The assumptions are that the fertility level would remain more or less the same until 2000 and the health facilities and other conditions will improve in the Marshall Islands and therefore the Life Expectancy at birth would increase approximately to the level of the developed countries at present. Population projections based on 1988 census will be released when Age-Sex distribution and other details are available.
