FOREWORD

This volume is the thirteenth edition of the Annual Statistical Report prepared in a booklet printed form. It contains data compiled from certificates registered with the Office of Vital Statistics (these certificates can be found on the back). The time period for this report is based on calendar year 1982.

It is hoped that this report will be useful to health data users. Questions and comments concerning data presented in this report should be directed to the Department of Public Health and Social Services, Office of Vital Statistics, P.O. Box 2816, Agana, Guam 96910.

In analyzing any data, the possibility of errors should not be overlooked. There are several types of possible errors, including errors by the informant as well as errors in processing and compilation. However, the most potentially dangerous error would be that of improper interpretation.

NATALITY - In 1982, Guam's live birth rate was 27.5 per 1,000 population. There were 2,267 babies born to married mothers and 725 to unwed mothers. Male births still accounted for 51.8 percent of total births and 48.2 percent were female. A total of 2,992 live births occurred for calendar year 1982 as compared with 3,008 for the previous year.

Multiple births for the year came to 53 and this constituted 1.8 percent of the 2,992 births occurred within the island.

The illegitimate birth rate among residents was 242.3 per 1,000 live births. There were 725 illegitimate live births in 1982 as compared to 663 for 1981, an increase of 62.

Babies of low birth weight, those weighing under five (5) pounds, eight (8) ounces, totaled 255 or 8.5 percent of the 2,992 live births recorded. The normal birth weight babies, those weighing five (5) pounds, nine (9) ounces to nine (9) pounds, fourteen (14) ounces were 2,710, 90.6 percent and 27 infants had high birth weight or 0.9 percent.

For the year, 1,971 or 65.9 percent of the 2,992 mothers reported that they had seen a physician for prenatal care within the first three months of their pregnancy. A total of 24 mothers or 0.8 percent of total births reported that they received no prenatal care at all.

MORTALITY - A total of 443 deaths was registered in 1982, 37 more than in 1981.

The most important data item reported on the death certificate is the cause of death. Knowing what people die of provides a measure of the health of the population. Death statistics by cause of death were based on death certificates coded for underlying cause using the 9th Revision of the International Classification of Diseases, World Health Organization.

The leading cause of death continued to be heart disease, accounting for 116 or 26.2 percent of all deaths. The ranking of the three (3) most frequent causes of death - heart disease, neoplasms and cerebrovascular disease has remained the same since 1980. Since 1973, perinatal conditions has been listed as one of the top ten leading causes of death except for 1979 and 1982. Diabetes mellitus has moved up from ninth place in 1981 to the fifth place. Other diseases of central nervous system climbed from seventh place in 1981 to fourth place in 1982. Motor vehicle accidents dropped from the fifth place to eighth in 1982.

MARRIAGES - In 1982, the number of marriages was 1,393 compared to 1,480 in 1981. The rate was 12.8 per 1,000 population, a slight decrease from the rate of 14.0 recorded in 1981.

For individuals previously widowed, the highest number of marriages occurred in the age groups 25-29 and 45-49 for women and 50-54 for men. Among those previously divorced, the age group 25-29 has the highest number of marriages for women and age group 30-34 for men. Age 25-29 was the most common age group for first marriages for both women and men. Of all the brides, 1,148 or 82.4 percent had never been married before; 1.4 percent were widowed; 14.9 percent were previously divorced; and 19 or 1.4 percent for annulment. The previous marital status of grooms was 1,135 or 81.5 percent were never married; 1.6 percent were widowers; 15.6 were previously divorced and 1.3 percent were annulled just about the same for brides. For marriages under the age of twenty, 16.5 percent were among the brides and 7.5 percent among the grooms.

June was the most popular month for marriages in 1982 with 138 marriages. The least popular month was January with only 81 marriages taking place.

DIVORCES - The trend in divorces for 1982 was upward with a total of 458 as compared with 357 in 1981. The rate was 4.2 per 1,000 population.

Marriages of 20 years and over duration had the highest number of divorces - 59 cases. Next was 3 years duration with 52 cases.

The largest proportion of wives and husbands undergoing divorce in 1982 was in the age group 25-29. The next age group was 20-24 for wives and age group 30-34 for husbands.

The year ended with 50 annulments.

DEFINITIONS

Since this report utilizes various terms and technical connotations, it is necessary to define them to aid reader in the correct interpretation of the data. The following terms and notes are listed to achieve that objective.

BIRTH WEIGHT - Weight of fetus or infant at time of delivery.

LIVE BIRTH - The complete expulsion or extraction from its mother of product of human conception, irrespective of the duration of pregnancy, which, after such expulsion or extraction, breathes, or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord or definite movement of the voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached.

GESTATIONAL PERIOD - Number of weeks elapsed between the first day of the last menstrual period and date of delivery.

LIVE-BIRTH ORDER - Order number is equal to number of previous live births plus current birth.

LOW-WEIGHT - Birth wherein the weight is equivalent to 2,500 grams or less (5lbs., 8ozs.).

FETAL DEATHS - Death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy; the death is indicated by the fact that after such expulsion or extraction the fetus does not breathe or show any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

INFANT DEATH - Death occurring to an individual of less than one year of age.

MATERNAL DEATH - Death wherein the physician has designated a maternal condition as the underlying cause of death.

NEONATAL DEATH - Death occurring to an infant less than 28 days of age.

PERINATAL DEATH - The total of fetal deaths and deaths to infants within the first six days of life.

OCCURRENCE - Place where the event actually occurred.

UNDERLYING CAUSE OF DEATH - That condition giving rise to the chain of events leading to death.

NATURAL INCREASE - The excess of births over deaths.

TECHNICAL NOTES

Crude Birth Rate:	$\frac{\text{Total Live Births} \times 1,000}{\text{Total Population}}$
Illegitimacy Rate:	$\frac{\text{Total Illegitimate Births} \times 1,000}{\text{Total Live Births}}$
Crude Death Rate:	$\frac{\text{Total Deaths} \times 1,000}{\text{Total Population}}$
Crude Rate of Natural Increase:	$\frac{\text{Live Births} - \text{Deaths} \times 1,000}{\text{Total Population}}$
Divorce and Annulment Rate:	$\frac{\text{Total Divorces and Annulments} \times 1,000}{\text{Total Population}}$
Fetal Death Rate:	$\frac{\text{Total Fetal Deaths} \times 1,000}{\text{Total Live Births}}$
Infant Death Rate:	$\frac{\text{Death under one year of age} \times 1,000}{\text{Total Live Births}}$
Perinatal Death Rate:	$\frac{\text{Number of Perinatal Deaths} \times 1,000}{\text{Total Live Births plus Fetal Deaths}}$
Marriage Rate:	$\frac{\text{Total Marriages} \times 1,000}{\text{Total Population}}$
Neonatal Death Rate:	$\frac{\text{Deaths less than 28 days} \times 1,000}{\text{Total Live Births}}$
Fertility Rate:	$\frac{\text{Total Live Births} \times 1,000}{\text{Total Female Population (age 15-44)}}$
Low-Weight Birth Rate:	$\frac{\text{Total Low-Weight Births} \times 1,000}{\text{Total Live Births}}$
